

# ATLAS PIG

Elastic, Shape Memory Pig

**A**tlas Pig is a highly flexible solid elastomer pig with shape memory used in situations where a mechanical pig cannot be applied, for example;

- No Launcher/Catcher facilities
- Changes in a pipelines internal diameter
- High risk of sticking due to wax, debris or scale build up
- Safe recovery of stuck mechanical pigs
- Coiled tubing

Atlas Pig is capable of deforming through chokes and restrictions up to 50% of its diameter and returning undamaged to its original size and shape once through.

## FEATURES

Functions perfectly in a wide range of temperature between 23°F and 167°F

Highly elastic

Withstands high pressures up to 8,700 psi

CEFAS approved and is safe to flush to the sea. Can be chemically broken

## APPLICATION

Atlas Pig can be supplied in two ways. Most commonly, it is supplied precast and ready to use in its launch canister but it can also be supplied as liquid components which are mixed by hand on site and poured into any suitable canister. The mixture then needs to be left for 24 hours to set. The liquid components can be stored for up to 6 months from the date of purchase meaning you can make your own pig, anywhere in the world, with only 24 hours notice.

As long as it does not need to be pressure rated the canister is lightweight, and is made to order. It is designed with a flange plate suitable to mate with the pipeline flange. The canister is bolted onto the pipe flange and a threaded plunger bolted to the other end. To push the pig into the pipeline you simply turn the plunger handle then unbolt the canister and replace the flange. The pig is then ready to launch.

Atlas Pig can be propelled with any gas or liquid and it is not sensitive to sour environments.

Supplied either precast in canisters or as liquid components in plastic pails.
